PROFESSIONAL SUMMARY

Full-Stack & AI Developer with expertise in TypeScript, React, Next.js, FastAPI, Solidity, and modern LLM ecosystems. Google Summer of Code 2026 Contributor at AOSSIE, building decentralized oracle infrastructure on EVM. Experienced in architecting scalable AI-powered applications, developer tooling, and production-ready full-stack systems using Gemini, Groq, MCP, and cloud-native technologies.

EDUCATION

Bachelor of Technology (Computer Science & Engineering) — Aug 2024 – May 2028
Birla Institute of Technology, Mesra — Grade: 8.01/10.0

Intermediate (Class XII) — 2022 – 2023
Noble Kingdom Senior Secondary School — Grade: 81.4%

Matriculation (Class X) — 2020 – 2021
Noble Kingdom Senior Secondary School — Grade: 98.0%

EXPERIENCE

Google Summer of Code 2026 Contributor — May 2026 – Nov 2026
AOSSIE — Remote

- Architected OrbOracle's ComposedOracle infrastructure enabling multiplication, division, and inversion of existing EVM price feeds to support composable decentralized derivatives.
- Engineered secure scaling, precision-aware rounding, stale-feed validation, and dependency verification mechanisms to ensure reliable oracle aggregation and protocol safety.
- Extended the OrbOracle Explorer with an intuitive interface for creating composed feeds, visualizing dependency graphs, and monitoring oracle health in real time.
- Developed comprehensive unit, integration, and fuzz testing suites using Foundry, significantly improving contract reliability and edge-case coverage.
- Built SEO-optimized landing pages for multiple Stability Nexus projects while preserving brand identity and improving discoverability.
- Collaborated with mentors through iterative code reviews, delivering production-ready smart contract, frontend, and CI/CD contributions to open-source repositories.

PROJECTS

PIYX — AI-Powered Educational Video Generation Platform (Github)

- Engineered an end-to-end AI platform that transforms natural-language prompts into structured educational videos using LLM reasoning and automated animation generation.
- Architected scalable FastAPI services to orchestrate Gemini, text-to-speech, ManimCE rendering, and FFmpeg video composition through modular processing pipelines.
- Designed a decoupled backend/frontend architecture enabling independent scaling of rendering workloads and interactive client experiences.
- Optimized AI workflow orchestration and rendering performance to generate high-quality educational content with minimal manual intervention.

SimAI — AI Physics Simulation Generator (Github)

- Developed an AI-powered platform that converts natural-language prompts into interactive browser-based physics simulations using Gemini 2.5 Pro.
- Implemented secure authentication with JWT and OAuth alongside Neon PostgreSQL and Drizzle ORM for scalable data persistence.
- Engineered reusable simulation rendering components and modular Next.js architecture for improved maintainability and extensibility.
- Refined prompt engineering strategies to significantly improve simulation accuracy, reasoning quality, and generated visualization consistency.

SKILLS

Computer Languages: Python, Java, JavaScript, TypeScript, Solidity
Frameworks & Libraries: React, Next.js, Node.js, Express.js, FastAPI, Tailwind CSS
AI/ML: Gemini API, Groq API, Model Context Protocol (MCP), Prompt Engineering, Text-to-Speech (TTS)
Databases: PostgreSQL, MongoDB, NeonDB
Cloud & DevOps: Git, GitHub Actions, Docker, AWS, Postman
Blockchain: Solidity, Foundry, Smart Contracts, EVM, Decentralized Oracles
